SwissProt_40:* Database :

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

In bilirubin binding:
Proc. Natl. Acad. Sci. U.S.A. 90:2409-2413(1993).
-!-FUNCTION: SERUM ALBUMIN, THE MAIN PROTEIN OF PLASMA, HAS A GOOD BILIRUBIN AND DRUGS. ITS MAIN FUNCTION IS THE REGULATION OF THE COLLOIDAL OSMOTIC PRESSURE OF BLOOD.
-!- SUBCELLULAR LOCATION: Secreted.
                                                                                                                                                                                                                                            420

ITS MAIN FUNCTION IS THE REGULATION OF THE COLLOIDAL OSMOTIC PRESSURE OF BLOOD.
-1- SUBCELLULAR LOCATION: Secreted.
-1- TISSUE SPECIFICITY: PLASMA.
-1- SIMILARITY: BELONGS TO THE ALBAPP/VDB FAMILY.
-1- SIMILARITY: CONTAINS 3 ALBUMIN DOMAINS.

ITS MAIN FUNCTION IS THE REGULATION OF THE COLLOIDAL OSMOTTC PRESSURE OF BLOOD.
--- SUBCELLULAR LOCATION: Secreted.
--- TISSUE SPECIFICITY: PLASMA.
--- SIMILARITY: BELONGS TO THE ALBARP/VDB FAMILY.
--- SIMILARITY: CONTAINS 3 ALBUMIN DOMAINS.
                                                                                                                                                                                                                                                                            MEDLINE=75011422; PubMed=4414013;

Fed. Proc. 33:1389-1389(1974).
-!- FUNCTION: SERUM ALBUMIN, THE MAIN PROTEIN OF PLASMA, HAS A GOOD
BINDING CAPACITY FOR WATER, CA++, NA+, K+, FATTY ACIDS, HORMONES,
BILIRUBIN AND DRUGS. ITS MAIN FUNCTION IS THE REGULATION OF THE
COLLOIDAL OSMOTIC PRESSURE OF BLOOD.
-!- SUBCELLULAR LOCATION: Secreted.
-!- TISSUE SPECIFICITY: PLASMA.
-!- TISSUE SPECIFICITY: BLLONGS TO THE ALB/AFP/VDB FAMILY.
-!- SIMILARITY: CONTAINS 3 ALBUMIN DOMAINS.
                                                                                                                                         cell-free system. Amino-

"Nuclectide and deduced amino acid sequence of sheep serum albumin.";
Nucleic Acids Res. 17:10495-10495(1989).
-i- FUNCTION: SERUM ALBUMIN, THE MAIN PROTEIN OF PLASMA, HAS A GOOD
BINDING CAPACITY FOR WATER, CA++, NA+, K+, FATTY ACIDS, HORMONES,
BILIRUBIN AND DRUGS. ITS MAIN FUNCTION IS THE REGULATION OF THE
COLLOIDAL OSMOTIC PRESSURE OF BLOOD.
                                     Ovis aries (Sheep).

"Sequencing of cDNA encoding serum albumin and its extrahepatic synthesis in the Mongolian gerbil, Meriones unguiculatus.";
"Sequencing of cDNA encoding serum albumin and its extrahepatic synthesis in the Mongolian gerbil, Meriones unguiculatus.";

-I to the Mongolian gerbil, Meriones unguiculatus.";
-I FUNCTION: SERUM ALBUMIN, THE MAIN PROTEIN OF PLASMA, HAS A GOOD BINDING CAPACITY FOR WATER, CA++, NA+, K+, FATTY ACIDS, HORMONES, BILIRUBIN MOD DRUGS. TITS MAIN FUNCTION IS THE REGULATION OF THE COLLOIDAL OSMOTIC PRESSURE OF BLOOD.
-I SUBCELLULAR LOCATION: Secreted.
-I TISSUE SPECIFICITY: PLASMA.
-I SIMILARITY: BELONGS TO THE ABLAFP/VDB FAMILY.
-I SIMILARITY: CONTAINS 3 ALBUMIN DOMAINS.

BLOPHYS. RES. COMMUN. 78:1060-1066(1977).

-!- FUNCTION: SERUM ALBUMIN, THE MAIN PROTEIN OF PLASMA, HAS A GOOD BINDING CAPACITY FOR WATER, CA++, NA+, K+, FATTY ACIDS, HORMONES, BILIZHUBIN AND DRUGS. ITS MAIN FUNCTION IS THE REGULATION OF THE COLLOIDAL OSMOTIC PRESSURE OF BLOOD.
-!- SUDCELLULAR LOCATION: Secreted.
-!- TISSUE SPECIFICITY: PLASMA.
-!- SIMILARITY: BELONGS TO THE ALB/APP/VDB FAMILY.
-!- SIMILARITY: CONTAINS 3 ALBUMIN DOMAINS.

"An albumin-like protein in the serum of non-parasitic brook lamprey
"An albumin-like protein in the serum of non-parasitic brook lamprey
(Lamperta appendix) is restricted to preadult phases of the life cycle
in contrast to the parasitic species Petromyzon marinus.";

Comp. Biochem. Physiol. 1278:251-260(2000).

-I FUNCTION: SERUM ALBUMIN, THE MAIN PROTEIN OF PLASMA, HAS A GOOD
BINDING CAPACITY FOR WATER, CA++, NA+, K+, FATTY ACIDS, HORMONES,
BILIRUBIN AND DRUGS. ITE MAIN FUNCTION IS THE REGULATION OF THE
COLLOIDAL OSMOTIC PRESSURE OF BLOOD.
-I SUBCELLULAR LOCATION: EXTRACELLULAR.
-I DEVELOPMENTAL STAGE: LARVAL (AMMCOCETE), METAMORPHOSING, AND
JUVENILE INDIVIDUALS, BUT NOT IN SEXUALLY MATURE ADULTS.
-I DOMAIN: COMPOSED OF AT LEAST THREE HOMOLOGOUS DOMAINS.
                                                                                                                                                                                                                                                                                                                                                                                  240
                                                                                                                                                                                                                                                                                                                                                                                                                                                 260

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   9
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               9
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              to site-directed mutagenesis to investigate the role of endoproteases in the generation of a 45 kDa albumin fragment obtd. when the cDNA is expressed in S. cerevisiae. Mutations were: R410A, L408A, L408V, V409A; and R410A, K413Q, K414Q. The latter set of mutations, especially, improved stability of HSA to yeast Yap3p proteolytic cleavage, allowing increased prodn. of recombinant HSA.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Fragments A-C of HSA are expressed as fusion proteins with the signal peptide of E. coli alkaline phosphatase. The fragments are selected for their specific properties. The C-terminal truncated fragment, B, does not bind long-chain fatty acids but does bind to various medicines at the central region. The N-terminal truncated fragment, C, has good stability in protein folding. The central segment, A, has characteristics of both B and C.
                                                                                                                                                                                                                                                                                                                                                                                                                for
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                New human serum albumin fragments - used to bond medicines and stable folding of protein(s).

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         The invention relates to a serum albumin-growth hormone fusion protein useful to treat growth hormone related diseases such as Down's syndrome. This sequence represents a HSA protein related to the serum albumin-growth hormone protein of the invention.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               δ
                                                                                                                                                                                                                                                                                                                                                                                                                                               The present sequence represents human albumin protein. The specification describes a method for the continuous detection of ischemic states. The method comprises detecting and quantifying the existence of an alteration of the serum protein albumin. The method comprises contacting a biological sample containing albumin from the patient with an excess quantity of a metal ion salt, where the metal ion binds to the N-terminus of naturally occurring human albumin, to form a mixture containing bound metal ions and unbound metal ions, and then determining the amount of metal ions bound to the albumin N-terminus. The amount of bound metal ions is correlated to a known value to determine the occurrence or non-occurrence of an ischemic event. The methods are useful for detection of ischemic states. The methods are useful for detection of ischemic states. The methods are useful for distinguishing perioperative ischemia from ischemia caused by , amongst other things, myocardial infarctions and progressive coronary artery disease.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   180

The method relates to a method of recombinantly producing human serum albumin (HSA) in yeast by altering the coding sequence of HSA to comprise a yeast codon bias. The complete HSA gene (AAA10091) was generated as three synthetic fragments (AAA10092-A10094) joined by recombinant DNA technology. Each HSA fragment was synthesised from overlapping oligonucleotide fragments that were extended. This sequence represents the complete sequence of the HSA encoded by the human gene with a yeast codon bias. The invention also covers a recombinant expression vector, yeast host cells carrying the recombinant expression vector and the process for producing human serum albumin in the yeast host cell, especially in secretory mode.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Process for preparing recombined human serum albumin - which comprises

a therapeutic protein: X and (a'fragment or variant of) albumin comprising a the fully defined sequence in ABB7906 of 585 amino acids, (where the fragment or variant has albumin or therapeutic protein: X cutivity). (I) can have cytostatic, anorectic, immunosuppressive, antidiabetic, antirheumatic, antiarthritic and psoriatic activities. Albumin fusion proteins are stabilised therapeutic proteins e.g. antibodies to C5, C242 and CD80 useful for treating various diseases and disorders such as non-Hodgkin's lymphoma, cancer, obesity, transplant rejection, type I diabetes mellitus, rheumatoid arthritis and disorders. Fusing albumin to therapeutic proteins stabilises the therapeutic protein stabilises the characteric protein stabilises the in vitro or in vivo biological activity. It also reduces the need to formulate protein solutions with large excesses of carrier proteins to prevent loss of therapeutic proteins due to factors such as binding to the container. The fusion proteins due to factors such as binding to the container. The fusion proteins are easily dispensed with a simple formulation requiring minimal post storage manipulation. The fusion of therapeutic proteins to albumin confers stability in aqueous or other solution. The present sequence respresents the mature human albumin (the present invention).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               The present invention describes an albumin fusion protein (I) comprising
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      New albumin fusion proteins, useful for treating diseases and disorders such as cancer, comprise therapeutic protein fused to albumin -

```
The invention relates to albumin fusion proteins comprising therapeutic protein and human albumin (HA). The albumin fusion proteins are useful in the treatment, prevention, diagnosis, and/or detection of diseases, disorders such as immune system disorders (transplant rejection); blood related disorders (myocardial infarction); hyperproliferative disorders (childhood acute myeloid leukaemia); renal disorder (glomerulonephritis); cardiovascular disorders (arrhythmias); respiratory disorders (non-allergic rhinitis); neurological diseases (Alzheimer's disease); endocrine disorders (pheocytochroma); reproductive system disorders (syphilis); infectious diseases (measles); gastrointestinal disorders (irritable bowel syndrome) and wound healing. The albumin fusion proteins are also used in the treatment of metastatic renal cell carcinoma, metastatic melanoma and HIV (human immunodeficiency virus) infection. Nucleic acid encoding albumin fusion protein is useful in gene therapy. The present sequence is human albumin (HA) protein.
                                                                                                                                                                                                                                                                                                                                                                                                                                                              Albumin fusion proteins comprising a therapeutic protein and albumin, useful in the treating metastatic renal cell carcinoma, metastatic melanoma, malignant melanoma, renal cell carcinoma, HIV (human immunodeficiency virus) or infection -
                                                                                                                                                                                                                                                                                                                                                                      Rosen CA, Sadeghi H, Prior CP, Turner AJ;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                The present invention relates to albumin fusion proteins, which comprise a therapeutic protein and albumin. The present sequence is the protein sequence for mature human serum albumin (HA), which was used to generate the fusion proteins of the present invention. The albumin fusion proteins are useful in the treatment, prevention, diagnosis, and/or detection of diseases/disorders such as immune system disorders (e.g. transplant rejection), blood related disorders (e.g. myocardial infarction),

The invention relates to albumin fusion proteins comprising therapeutic protein and human albumin (HA). Therapeutic protein fused to albumin fusion proteins are useful in the treatment, prevention, diagnosis and/or detection of diseases, disorders such as immune system disorders (e.g. transplant rejection), blood related disorders (e.g. myocardial infarction), hyperproliferative disorders (e.g. cardiovascular disorders (e.g. arrhythmias), cespiratory disorders (e.g. non-allergic rhinitis), neurological diseases (e.g. Alzhehmer's disease), endocrine disorders (e.g. pheocytochroma), reproductive system disorders (e.g. syphilis), infartions diseases (e.g. measles), gastrointestinal disorders (e.g. infactious diseases (e.g. measles), gastrointestinal disorders (e.g. infactious diseases (e.g. masales), measles), mucleic acids encoding albumin fusion protein is used in gene therapy. The present sequence

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   The invention relates to human albumin (HA) fusion proteins and their corresponding nucleic acid sequences. Therapeutic proteins fused to albumin or its fragments have an extended shelf-life. The albumin clusion proteins are useful in the treatment, prevention, diagnosis, and/or detection of diseases, disorders such as immune system disorders (e.g. transplant rejection), blood related disorders (e.g. myocardial infarction), hyperproliferative disorders (e.g. childhood acute myeloid leukaemia, metastatic renal cell carcinoma, metastatic melanoma, malignant melanoma, renal cell carcinoma, retastatic melanoma, malignant melanoma, renal cell carcinoma, retastatic ceg. glomerulonephitis), cardiovascular disorders (e.g. arrhythmias), respiratory disorders (e.g. non-allergic rhinitis), neurological diseases (e.g. Alzheimer's disease), endocrine disorders (e.g. arrhythmias), infectious diseases (e.g. measles), gastrointestinal disorders (e.g. pheocytochroma), reproductive system disorders (e.g. syphilis), infection diseases (e.g. measles), gastrointestinal disorders (e.g. irritable bowel syndrome), HIV (human immunodeficiency virus) infection and wound healing. Nucleic acids encoding albumin fusion protein is used in gene therapy. The present sequence is human albumin.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Albumin fusion proteins comprising a therapeutic protein and albumin, useful in the treating metastatic renal cell carcinoma, metastatic melanoma, malignant melanoma, renal cell carcinoma, HIV (human immunodeficiency virus) or infection -

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            ò
                                                                                                                                                            ;
                      The invention related to a method for testing cancer cells. The method is useful for measuring human cancer cell proliferation, particularly for determining the potential for inhibiting cancer cells proliferation using albumin-derived peptides. The invention is also useful for drug screening assays, as well as for evaluating biopsied tumours. The present sequence is human serum albumin (HSA) related to the invention.
                                                                                                                                                                                                                                                 180

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              therapeutic protein X and human albumin (HA, also known as human albumin, HSA). The proteins are useful for treating a disease or disorder that may be modulated by therapeutic protein X. The albumin extends the shelf-life of protein X, and may increase its biological in vitro/in vivo activity. The protein is useful for treating and diagnosing disorders such as cancer, reproductive disorders, disease, disorders (e.g. acquired immunodeficiency syndrome, AIDS), endocrine disorders (e.g. diabbetes), haematopoietic disorders, neural disorders (e.g. Alzheimer's, Parkinson's, Creutzfeldt-Jacob disease, encephalomyelitis, meningitis, schizophrenia), and connective disorders (e.g. osteoporosis, arthritis). The present sequence represents HSA
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        240
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           240
